Northwest Atlanta II (White Provisions)- 1998 UEZ
A BRIEF HISTORY OF UEZ

In 1983, the Georgia General Assembly approved legislation to allow for the creation of Urban Enterprise Zones (UEZ) in the City of Atlanta. The legislation creates an opportunity for developers to access a 10-year tax abatement on property improvements on equitable projects in designated areas of the city.

The goal of the program is to incentivize development in neighborhoods struggling to recruit impactful projects.

UEZs can be used to incentivize industrial, commercial, affordable housing, and mixed use projects. In the early years of the program, there were many commercial district projects and industrial developments. The UEZ program has been used to varying degrees over the past 30+ years, seeing periods of focused usage. During a brief revitalization period in the early 00s, there was a focus on using UEZ designation for affordable housing. In the late 90s there was a focus on mixed-use and industrial projects like Northwest II and The Met (both highlighted in this report).

Overall, UEZs have been successful in spurring development, creating jobs, and expanding the city’s affordable housing stock.

This report details active UEZ projects and makes recommendations on how to effectively use this tool to guide equitable development throughout the city.
DATA COLLECTION

Fulton County Tax Commissioner
The office of the Fulton County Tax Commissioner provided the list of active UEZs, parcel IDs, project name, current assessed value and pre-UEZ assessed value (when possible), tax digest, and current abatement percentage for each active UEZ.

Georgia Department of Community Affairs
The Georgia DCA provided information for Housing UEZ compliance including: the current number of affordable housing units, current total housing units, the number of units available for residents of varying AMI percentages.

The City of Atlanta Office of Revenue
The Office of Revenue provided information to track the businesses in operation on Commercial and Industrial UEZs. The information received from this office includes: number of businesses in operation on active UEZs, the number of employees employed at businesses on UEZ properties, the revenue generated by businesses on active UEZs.

A NOTE ABOUT THE REPORT
The last annual report completed for the UEZ program was submitted in 2004. Since that time quite a few UEZ projects have come on board and even more have expired. The available information about these projects is limited. The primary goal of this report is to provide an update to the current state of affairs for active UEZs and give context for its potential to be used by the city to incentivize equitable development across the city.
CURRENT STATE OF UEZ
AN EQUITY TOOL

The UEZ program currently has 15 active projects. The portfolio includes Housing, Industrial, and Commercial projects.

The UEZ program effectively incentivizes equitable development across the city. By delaying the city’s increase in property taxes for the first few years of a new development, the city has been able to use these projects to significantly increase the tax digest while supporting job creation, economic development, and affordable housing in distressed neighborhoods across the city.

UEZ AT A GLANCE

15 Active UEZs
539 Affordable Housing Units
100% of Affordable Housing for 60% AMI or below
139 Businesses in operation
1129 Jobs Created
555M Business revenue
499M Property value of active UEZs
HOUSING
Affordable for everyone

AVALON RIDGE
Built in 2009 in Glenrose Heights, Avalon Ridge Apartments offers high quality, affordable housing with ample amenities and comfortable units.

Avalon Ridge has 199 units reserved for residents qualifying for 60% AMI.

The City of Atlanta was able to provide this for $60k in tax abatement in 2018, the final year of their UEZ designation.

75%
The active housing UEZs have at least 75% of their units reserved for 60% AMI or below.

6
There are 6 active housing UEZS.

539
Current affordable housing units in active UEZs.

Housing UEZs are highly efficient at producing and incentivizing Affordable Housing development. By encouraging equitable and sustainable housing, the tool can be leveraged to help meet the Mayor’s anti-displacement agenda with a high return on investment for the city.
539
The total number of affordable housing units provided by active UEZs.

$325
The city abated $175k in taxes in 2018 to provide these affordable units. That breaks down to only $325 per unit (60% AMI or below).
Building a Strong Workforce

The Met

Formerly named Candler Warehouse after Assa Candler, this massive 1 Million sq. ft. 1914 warehouse in Adair Park was brought back to life with this 1996 UEZ. After being condemned by the City of Atlanta in 1981, the UEZ gave it a new lease on life, creating space for small businesses and local entrepreneurs to thrive.

During 2017, The Met was home to 59 small businesses ranging from film and fashion to landscaping and artisan crafts.

Jobs created in 2017 on active Industrial UEZs

485

Businesses in operations on active Industrial UEZs

83

Revenue generated by businesses operating in active Industrial UEZs

$350M
Taking up a large part of West Midtown, Northwest II has been one of the most successful UEZs at generating economic development in previously abandoned or undesirable land.

The success of this project has created an affordability crisis in the surrounding area. Future UEZs should insert equity requirements into commercial projects to ensure that these developments yield a more equitable Atlanta.
UEZs are most often used to develop abandoned, underused, or brownfields. The properties prior to the UEZ-incentivized development, tend to generate very small amounts of tax revenue for the City of Atlanta. Through this program, the city foregoes the increase in property tax revenue (but not business revenue) for the first 5 years. This calculated loss, allows the city to increase the level of investment in less typical neighborhoods and increase the property tax base in the long run. The taxable property values for active UEZs (particularly commercial and industrial) has skyrocketed during the life of the UEZ and now pay significantly more in property taxes that prior to the UEZ development.

$57.7M Increase in property value for the Porsche UEZ, developed on a former brownfield

579% Increase in property values of active UEZs over the life of the abatement

$413M Total increase in property values of active UEZs over their lifespan

$4.7M Tax Revenue generated by active UEZs in 2018

$1.8M Tax Revenue abated by active UEZs in 2018
THE FUTURE OF UEZ: RECOMMENDATIONS

Create Pre-Qualification Areas for UEZs
- Create a GIS map using the distressed area criteria that can be used to identify pre-qualifying areas of the city to inform developers of incentives in certain neighborhoods.
- Position the UEZ program as a ‘gap’ incentive program for areas in distressed neighborhoods that are not supported by a TAD (UEZs are ineligible in TADs).
- Develop a list of focus areas to highlight incentive opportunities for developers creating equitable projects.

Create legislation to require local hiring for projects
- Require that all new UEZs hire a percentage of their workforce locally. This could also connect to workforce development programs to aid career pipeline building.
- Mandate the local hiring requirement for the life of the UEZ.
- Require living wage mandates or funding of workforce development programs.

Layer as stackable incentive
- Leverage stackable incentives by increasing the requirement to receive the incentive when stacking multiple incentive programs.
- For example: if a developer is already receiving incentives for 20% affordable housing, acceptance to the UEZ program would require the percentage to increase to 30%.
- Use extra incentive package to require local hiring and better wages.

Build internal capacity
- Hire a Real Estate Project Manager to oversee the program and a Compliance Manager to coordinate compliance monitoring for UEZ and similar programs.
- Create a cross-functional UEZ committee to review applications, make legislative recommendations, and oversee program compliance. The committee should include members from Housing, Economic Development, Buildings and Zoning, Invest Atlanta, etc.
- Develop program operations manual to guide implementation of the program.

Develop a plan to re-launch the program
- Create program operations manual for program re-boot
- Build necessary internal capacity: staffing and committee formation.
- Develop timeline for 2019 re-launch.
- Craft legislation to require local hiring on new UEZ projects.
- Develop marketing strategy to draw new interest in UEZ.
Sweet Cheats (692 Kirkwood) - 2010 UEZ

QTS Data Center (Space Center) - 1996 UEZ

Fairlie-Poplar District - 1997 UEZ
The UEZ program has the potential to be significantly expanded and used to promote and incentivize equitable development in Atlanta. It has the flexibility to impact a wide range of projects and push for thoughtful and equitable development as Atlanta grows.
